## Research Analyst: Circulytics Team Cowes, Isle of Wight, UK

---

Measuring performance is vital for any business. We cannot create a circular economy until we can properly measure it. This is an exciting opportunity to be part of our UK team, where you will assess company-level progress through our free and award-winning Circulytics tool. This is a key area in unlocking the transition to a circular economy and is a fast-moving topic globally.

Our performance measurement programme aims to accelerate the transition to a circular economy by developing methods to reliably measure, assess, and communicate circular economy performance. This is a strategic focus of the Foundation. The mainstay of this programme is Circulytics, a circular economy performance measurement tool [used by over 1,000 companies](#) and the most comprehensive tool of its kind available.

### Role & Responsibilities

**Circular Economy Performance Analysis:** In-depth review of corporate circular economy performance based on Circulytics indicators; identifying common challenges, individual success stories, areas for improvement and relevant circular economy insights from company assessments and feedback.

**Capacity building & knowledge transfer:** Packaging circular economy knowledge and insights into reports, case studies, webinars, and other assets and tools.

**Being a trusted partner for a broad group of international stakeholders:** Working with a wide range of stakeholders ranging from companies, policymakers and cities to NGOs, academics and others from various different geographies. Supporting them in measuring organisational performance and identifying opportunities for advancing further.

**Representing the Foundation and Circulytics externally:** Being a representative of the Foundation and Circulytics in meetings, on stage at events, and at conferences.

### Your profile

- 1-2 years' experience in a role related to Business, Economics, or science fields. Alternatively, a Master's degree in a related subject. Relevant subject matter expertise in circular economy or environmental sustainability topics would be an advantage.

- Strong problem-solving abilities: The analytical skills and capability to structure complex problems, understand the calculations underpinning Circulytics, extract key insights and stats from data, and apply the circular economy principles to a given context.
- Strong communication skills: The ability to interact effectively at all levels of an organisation, to facilitate productive group discussions, and to contribute proactively to problem solving in meetings and workshops.
- Excellent written and spoken English; other languages would be a definite advantage.

Location: Cowes, Isle of Wight, UK.

### **What we do**

The Ellen MacArthur Foundation develops and promotes the idea of a circular economy. We work with, and inspire, business, academia, policymakers, and institutions to mobilise systems solutions at scale, globally. Our mission is to accelerate the transition to a circular economy.

Our vision is a new economic system that delivers better outcomes for people and the environment. Business models, products, and materials are designed to increase use and reuse, replicating the balance of the natural world, where nothing becomes waste and everything has value. A circular economy, increasingly built on renewable energy and materials, is distributed, diverse, and inclusive.

### **Our commitment to you**

The Ellen MacArthur Foundation is committed to promoting equal opportunities in employment and providing a working environment free from discrimination. Job applicants will receive equal treatment regardless of age, disability, gender, gender reassignment, marital or civil partner status, pregnancy or maternity, race, colour, nationality, ethnic or national origin, religion or belief, sex or sexual orientation or any other characteristic protected by the laws or regulations in the locations where we operate.
